Kent Robert B. Dela Cruz

kent.code.delacruz@gmail.com | +63 9459765702| San Jose City, Nueva Ecija

SUMMARY OF QUALIFICATIONS

Full-stack developer who has shipped production features on a live university admissions platform and independently architected two full-stack systems end-to-end from database schema to production-ready UI. Comfortable owning a feature from requirements through release across React, Next.js, PHP/Laravel, and both relational and NoSQL databases.

RELEVANT EXPERIENCE

Central Luzon State University - Office of Admissions (OAD)
Science City of Muñoz, Nueva Ecija, Philippines
Web Developer Intern *February 2025 - June 2025*

- Rebuilt the admissions website frontend, aligning UI/UX with CLSU's design standards to improve usability and accessibility for prospective applicants.
- Engineered dynamic, multi-step application forms with real-time client-side validation and conditional navigation logic, reducing friction and submission errors in the application flow.
- Owned feature delivery from requirements through release, coordinating directly with OAD staff to ship all assigned functionality on schedule within a fixed internship timeline.

Independent Projects
DocQuery – RAG-based PDF Q&A tool
Live Demo: https://rag-doc-query.vercel.app/
GitHub: https://github.com/kentcode-002/rag-doc-query.git

- Architected a Retrieval-Augmented Generation (RAG) pipeline enabling natural-language Q&A over user-uploaded PDFs, grounding every answer in retrieved document content to minimize hallucination.
- Implemented document embedding and semantic vector search to retrieve the most relevant passages for a given query.
- Integrated an LLM API to generate grounded, context-aware answers, and deployed the tool live for public use.

Smart Inventory Tracker – Next.js, TypeScript, Supabase, Prisma, PostgreSQL, Tailwind CSS.
GitHub: https://github.com/kentcode-002/smart-inventory.git

- Designed and built a full-stack SaaS inventory system with authentication, role-based access control (Admin/Staff), and protected routes using Supabase Auth and Next.js middleware.
- Implemented product management, stock adjustment, supplier tracking, and transaction recording with real-time low-stock alerts and notifications.
- Modeled a normalized PostgreSQL database schema with Prisma ORM, handling relational data across products, categories, suppliers, transactions, and inventory logs, and built a responsive analytics dashboard with sales tracking, inventory valuation, and CSV export using Recharts and TanStack Table.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, PHP, Python, C#
Frontend: React.js, Next.js, Tailwind CSS
Backend: Laravel
Database: MySQL, MongoDB, PostgreSQL
Tools & DevOps: Zapier, WordPress, Git, GitHub, Docker

EDUCATION

Central Luzon State University
Science City of Muñoz, Nueva Ecija, Philippines
Bachelor of Science in Information Technology *August 2020 - July 2025*
